

## **The presentation of deep enteroscopy of Taiwan**

**Cheng-Tang Chiu**

**President of Taiwan Association for the Study of Small Intestinal Diseases**

Small intestine is regarded as no man's land for a long time, and deep enteroscopy finally took the mystery out in 2000. In Taiwan, the prevalence of small intestinal disease dramatically increased within 10 years. With a view to it, we started first capsule endoscopy and double balloon enteroscopy since 2004. After that, single balloon enteroscopy was also started in 2008. Till now, we had more than 1400 person-time capsule endoscopies, 2000 person-time double balloon enteroscopies and more than 1500 person-time single balloon enteroscopies in Taiwan. Besides, there were more and more related publications since 2006. In order to promote the study of small intestine, we organized Taiwan Small Intestine Study Club on 2007/01/06. Making effort more than seven years, Taiwan Association for the Study of Small Intestinal Diseases was born on 2014/03/09. This association provided the excellent platform for experts to share their experience and idea about deep enteroscopy in Taiwan. However, there is still a long way to piece together all the research results to see the whole picture of small intestinal disease.
